JUN 02 1986

Dear Sir:

IEPA - DAFC - SPFLD

Perma-Treat is a wood perserving plant located in Marion IL. The city of Marion sold us approximately 10 acres of ground in the old Industrial Park in 1982. It was vacant ground seedéed with grass. This is sufficient for outside storage for our kind of facility. However, on the loading and main road area we have put down \$30,000 worth of rock. The apparent violation comes from when it rains, the mud oozes up from the bottom to the surface. When this dries it becomes dust. The trucks pick it up on their wheels as they pull in and out of our plant. We have never received a complaint nor has your office until the American Gas & Wash was built on the only road in and out of our plant. These people were aware of the dust before building there. This problem only exist for short periods during extended dry weeks. Our estimate is that three to four weeks out of every year this problem occurs.

We are presently contacting companies with the expertise to correct this problem. It may be very costly and economically impossible. This will be evaluated as all information is collected. We will inform you of later developments to correct this apparent violation.

For more information please feel free to contact me.  
Thank you for your cooperation in this matter.

Sincerely,

  
RUDY S. BOND  
PRESIDENT
